1．Fig． 1 shows a classical CMOS class－AB output stage．For the case that $\mathrm{Q}_{1}$ and $\mathrm{Q}_{2}$ are matched， $\mathrm{Q}_{\mathrm{N}}$ and $\mathrm{Q}_{\mathrm{P}}$ are matched， $\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{\mathrm{SS}}=3.3 \mathrm{~V}, \mathrm{~V}_{\mathrm{tn}}=\left|\mathrm{V}_{\mathrm{tp}}\right|=$ $0.7 \mathrm{~V}, \mathrm{I}_{\mathrm{Q}}=5 \mathrm{~mA}, \mathrm{I}_{\text {BIAS }}=0.4 \mathrm{~mA}, \mathrm{k}_{\mathrm{n}}{ }^{\prime}=300 \mu \mathrm{~A} / \mathrm{V}^{2}, \mathrm{k}_{\mathrm{p}}{ }^{\prime}=150 \mu \mathrm{~A} / \mathrm{V}^{2}$ ，and each transistor operates at $\mathrm{V}_{\mathrm{ov}}=0.15 \mathrm{~V}$ ．Please answer the following questions．
（a）Derive $\mathrm{V}_{\mathrm{GG}}$ in terms of $\mathrm{V}_{\mathrm{tp}}, \mathrm{V}_{\mathrm{tn}}, \mathrm{I}_{\text {bias }}, \mathrm{k}_{\mathrm{n}}, \mathrm{k}_{\mathrm{p}}, \mathrm{W}$ and L ．
（b）Please find the value of $V_{G G}$ ．
（c）Derive the relationship between $\mathrm{I}_{\text {BIAS }}$ and $\mathrm{I}_{\mathrm{Q}}$ ．
（d）Find（W／L）for each of $\mathrm{Q}_{1}, \mathrm{Q}_{2}, \mathrm{Q}_{\mathrm{N}}$ and $\mathrm{Q}_{\mathrm{p}}$ ．
（e）Find $\mathrm{v}_{\mathrm{i}}$ if in the quiescent state with $\mathrm{v}_{\mathrm{o}}=0 \mathrm{~V}$ ．
（Hint：For $\left.\mathrm{Q}_{1}, I_{D 1}=\frac{1}{2} k_{n}{ }^{\prime}\left(\frac{W}{L}\right)_{1}\left(V_{G S 1}-V_{t n}\right)^{2}\right)$

Fig． 1

2．Fig． 2 shows a source－follower output stage，whose $\mathrm{M}_{2}$ is biased at a constant current $\mathrm{I}_{\text {BIAS }}=2.5 \mathrm{~mA}$ ．Note that $\mathrm{R}=1 \mathrm{k} \Omega, \mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V}, \mathrm{~V}_{\mathrm{CM}}=0.5 \mathrm{~V}_{\mathrm{DD}}, \mathrm{V}_{\mathrm{ov}}=0.2 \mathrm{~V}$ for all MOSFETs．
（a）Which type of the output stage is it？Explain your answer．
（Hint：Class－A／class－B／class－AB／class－C／class－D）
（b）Please describe the definition of power conversion efficiency．
（c）If output voltage（vout）is an 2－V－peak sinusoid with common mode voltage $\mathrm{V}_{\mathrm{CM}}$ ，please find the power conversion efficiency of Fig． 2.

Fig． 2

3．Fig．3（a）shows a bistable multivibrator circuit，where output saturation voltages $L_{+}=\left|L_{-}\right|=10 \mathrm{~V}, \mathrm{R}_{1}=1 \mathrm{k} \Omega$ and $\mathrm{R}_{2}=4 \mathrm{k} \Omega$ ．Fig．3（b）shows a triangular－wave generator，which comprises the multivibrator circuit used in Fig．3（a）and an integrator．
（a）Find the threshold voltages $V_{\text {th }}$ and $V_{\text {tL }}$ of Fig．3（a）．
（b）Sketch the transfer characteristic curve of Fig．3（a），i．e．va－to－vb plot．
（c）Let $\mathrm{R}_{3}=100 \mathrm{k} \Omega, \mathrm{C}=10 \mathrm{pF}$ ，find the frequency of the triangular wave at va in Fig．3（b）．

Fig．3（a）

Fig．3（b）

4．Fig． 4 shows a general form of LC－tuned oscillator circuit．Please answer the following questions．
（a）Please describe the Barkhausen criterion．
（b）Based on Fig．4，please draw the Collpitts oscillator．
（Hint：Two capacitors $\mathrm{C}_{1}, \mathrm{C}_{2}$ and one inductor L are needed．）
（c）Based on（b），please derive the oscillation frequency．
（d）Based on（b），please draw the Collpitts crystal oscillator and explain how it works．

Fig． 4
5．Figs．5（a）and（b）show two bistable circuits．Let the output saturation vlotages $\mathrm{L}_{+}=-\mathrm{L}_{-}=20 \mathrm{~V}$ ，the threshold voltages $\mathrm{V}_{\mathrm{TH}}=-\mathrm{V}_{\mathrm{TL}}=5 \mathrm{~V}$ ，and $\mathrm{R}_{1}=15 \mathrm{k} \Omega$ ．
（a）Please find $\mathrm{R}_{2}$ in Fig．5（a）．
（b）Please sketch the transfer characteristic curve in Fig．5（a）．
（c）If a DC voltage $\mathrm{V}_{\mathrm{DC}}=4 \mathrm{~V}$ is inserted，as shown in Fig．5（b），please sketch its transfer characteristic curve．
（Note：Each transfer characteristic curve should include marks of $\mathrm{L}_{+}$， L ．， $\mathrm{V}_{\mathrm{TH}}, \mathrm{V}_{\mathrm{TL}}$ ，and the direction of the transfer operation．）

Fig．5（a）

Fig．5（b）

6．Figs．6（a）and（b）show two crystal oscillators，and the configuration in Fig．6（b）is the most commonly used configuration nowadays．Please answer the following questions．
（a）Describe the Barkhausen criterion．
（b）Draw the small signal model and derive the loop gain of Fig．6（a）．
（c）According to the results in（b），prove that the oscillation frequency
（d）Explain how the oscillator works in Fig．6（b）．
$\omega_{0}=\frac{1}{\sqrt{\mathrm{~L} \frac{C_{1} C_{2}}{C_{1}+C_{2}}}}$.

Fig．6（a）

Fig．6（b）

7．Please briefly describe the definitions of the following terms．
（a）Total harmonic distortion
（b）Crossover distortion
（c）Inter－modulation distortion
（d）Explain（i）class A，（ii）class B，and（iii）class AB amplifier．
（e）Class－D amplifier
（f）Barkhausen criterion
（g）Astable mutlibrator
（h）Darlington configuration npn compound device
（i）Demonstrate that even harmonics are eliminated in a balanced push－pull amplifier
（j）Show that the maximum conversion efficiency of idealized class B push－pull circuit is $78.5 \%$
（k）Power conversion efficiency
（l）Non－linearity

8．Figs．8（a）and（b）show two multivibrator circuits．Fig．8（c）shows the waveforms of the circuit in Fig． 8（a）．Fig．8（d）shows the waveform of $\mathrm{V}_{\mathrm{O} 3}$ in Fig．8（b）．Let the inverter＇s transition threshold voltage $\mathrm{V}_{\mathrm{T}}=$ $0.5 \mathrm{~V}_{\mathrm{DD}}$ and the forward bias voltage across the diode is zero．
（a）Which type of the multivibrator is it？（Hint：bistable，astable，or monostable）
（b）Please find the oscillation frequency of the circuit in Fig．8（a）in terms of $\mathbf{R}_{\mathbf{1}}$ and $\mathbf{C}_{\mathbf{1}}$ ．
（c）Please explain the sudden rises and drops in the waveform of node $\mathrm{v}_{\mathrm{X} 1}$ in Fig．8（c）．
（d）Please explain why the peak voltage of $\mathrm{V}_{X}(\mathrm{t})$ is $\mathrm{V}_{\mathrm{DD}}+\mathrm{V}_{\mathrm{T}}$ ．
（e）Please explain the difference between Fig．8（a）and（b）when $R_{2} \neq R_{3}$ ．
（f）In Fig．8（b）and（d），let $\mathrm{C}_{2}=15 \mathrm{nF}$ and $\mathrm{T}=60 \mu \mathrm{~s}$ ．Please find $\mathrm{R}_{2}$ and $\mathrm{R}_{3}$ ．
（Hint：RC circuit response $\left.v(t)=v(\infty)+[v(0)-v(\infty)] e^{-t / \tau}\right)$

Fig．8（a）

Fig．8（b）

Fig．8（c）

Fig．8（d）

9．Fig． 9 shows a phase－shift oscillator with two unity－gain buffers and an ideal negative－gain amplifier （gain $=-K$ ）．Let $R=2 k \Omega, C=200 p F$ ．Please
（a）describe the Barkhausen oscillation criterion．
（b）derive its loop gain $L(s)$ in terms of $\mathbf{R}, \mathbf{C}$ and $\mathbf{K}$ ．
（c）find the oscillation frequency of the oscillator．
（d）find K ．

Fig． 9

10．Figs．10（a）and（b）show a power transistor operated at junction temperature $\mathrm{T}_{\mathrm{J}}$ of $160^{\circ} \mathrm{C}$ with the case attached to a heat sink．The heat sink temperature $\mathrm{T}_{\mathrm{S}}$ is found to be $85^{\circ} \mathrm{C}$ ．The total thermal resistance $\theta_{\text {JA }}$ $=6.75^{\circ} \mathrm{C} / \mathrm{W}$ ．If the ambient temperature $\mathrm{T}_{\mathrm{A}}$ is $25^{\circ} \mathrm{C}$ ，please calculate
（a）case temperature $\mathrm{T}_{\mathrm{C}}$ and heat sink temperature $\mathrm{T}_{\mathrm{s}}$ ．
（b）thermal resistance $\theta_{\mathrm{JC}}$ ．
（c）thermal resistance $\theta_{\mathrm{CS}}$ ．
（d）power dissipated，$P_{D}$ in the device．
（e）find the maximum power that can be dissipated safely when operated at $\mathrm{T}_{\mathrm{A}}=60^{\circ} \mathrm{C}$ ．
（f）find the temperature of the case when the maximum power that can be dissipated safely at $\mathrm{T}_{\mathrm{A}}=50^{\circ} \mathrm{C}$ ， with a heat sink that $\theta_{\mathrm{CA}}=7.5^{\circ} \mathrm{C} / \mathrm{W}$ ．

Fig．10（a）

Fig．10（b）

11．Fig． 11 shows a OPAMP－RC oscillator．Assuming that the OPAMP is ideal，please answer the following questions．
（a）Find the loop gain by breaking the loop at $\mathrm{V}_{\mathrm{d}}$ ．
（b）Find the oscillation frequency．
（c）When $\mathrm{R}_{1}=10 \mathrm{k} \Omega$ ，find the range of $\mathrm{R}_{2}$ ．

12．Fig． 12 shows an source－follower output stage with a current－source load， whose gate terminal of $M_{1}$ is biased at the constant $V_{\text {BIAs．Assume that }} R=1$ $\mathrm{k} \Omega, \mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V}, \mathrm{~V}_{\mathrm{ov}}=0.2 \mathrm{~V}$ for all MOSFETs，and input frequency $\omega_{\mathrm{IN}} \gg \frac{1}{\mathrm{RC}}$ ．
（a）Please specify the type of this output stage，and explain your answer．
（class－A／class－B／class－AB）
（b）If $\mathrm{I}_{\text {BIAs }}$ is designed as 4 mA ，please find the output swing，and sketch the vout－to－id transfer characteristic curve．
（c）If $\mathrm{I}_{\text {BIAS }}$ is designed as 2 mA ，please repeat（b）．

Fig． 12

13．Fig． 13 shows a multivibrator circuit and its vo waveform．Assume that the output switches between $+V_{P}$ and $-V_{P}$ ．Please
（a）specify the type of this multivibrator．（bistable／astable／monostable）
（b）sketch the waveform of Vc ．
（c）calculate $\mathrm{T}_{1}$ in Fig． 13.
（d）calculate the oscillation frequency in terms of $\mathrm{R}_{Y}, \mathrm{R}_{\mathrm{X}}$ and C ．
$\left(\right.$ Hint：$R C$ circuit response：$\left.v_{C}(t)=v_{C}(\infty)+\left[v_{C}(0)-v_{( }(\infty)\right] \mathrm{e}^{-\mathrm{t} / \tau}\right)$

Fig． 13

14．Fig． 14 shows a phase－shift oscillator，where three－stage RC filter and the inverting amplifier are included． Assume that the op－amps are ideal，please answer the following questions．
（a）Express the oscillator＇s loop gain in terms of $\mathrm{R}_{1}, \mathrm{R}_{2}$ and C ．
（b）Derive the oscillation frequency of the oscillator．
（c）Find the $v_{0}-\mathrm{to}_{\mathrm{t}}-\mathrm{v}_{\mathrm{X}}$ gain attenuation and phase shift at the oscillation frequency．
（d）Find the resistor ratio $\mathrm{R}_{2} / \mathrm{R}_{1}$ to sustain the oscillation．

Fig． 14

15．Fig． 15 shows a multivibrator circuit and its waveforms，where $\mathrm{R}=20 \mathrm{k} \Omega, \mathrm{C}=10 \mathrm{nF}$ and the inverter＇s transition threshold voltage $\mathrm{V}_{\mathrm{T}}=0.5 \mathrm{~V}_{\mathrm{DD}}$ ．
（a）Which type of multivibrator is it？（bistable／astable／monostable）
（b）Please sketch the waveform of the $\mathbf{V}_{\mathbf{x}}$ ．
（c）Calculate $\mathrm{T}_{1}$ ．
（Hint：RC circuit complete response： $\left.\mathrm{v}(\mathrm{t})=\mathrm{v}(\infty)+[\mathrm{v}(0)-\mathrm{v}(\infty)] \mathrm{e}^{-\mathrm{t} / \tau}\right)$

Fig． 15

16．（a）A power amplifier IC has a power－conversion efficiency of $55 \%$ ．Let the average power drawn from supplies is 20 W and the maximum junction temperature $\mathrm{T}_{\mathrm{Jmax}}=150^{\circ} \mathrm{C}$ ，please find the maximum thermal resistance $\theta_{\mathrm{Ja}}$ for safely operating at ambient temperature of $60^{\circ} \mathrm{C}$ ．
（b）If the $\theta_{\mathrm{JA}}=15^{\circ} \mathrm{C} / \mathrm{W}$ ，please find the junction temperature if the IC is operating at $25^{\circ} \mathrm{C}$ and is dissipating 5 W ．

17．Fig． 17 shows two bistable circuits，where the saturated output voltages of the op－amps are $\pm 10 \mathrm{~V}$ ． Assume that $\mathrm{R}_{1}=25 \mathrm{k} \Omega, \mathrm{R}_{2}=75 \mathrm{k} \Omega$ and the forward－biased voltage of diodes are 0.7 V ．
（a）In Fig．17（a），find their negative and positive threshold voltages（ $\mathrm{V}_{\mathrm{TL}}$ and $\mathrm{V}_{\mathrm{TH}}$ ）of input triggers．
（b）Sketch the transfer characteristics of $\mathrm{V}_{\mathrm{O}}$ vs． $\mathrm{V}_{\mathrm{I}}$ in Figs．17（a）and 17（b），respectively．（mark the $\mathrm{v}_{\mathrm{O}}$ saturation voltage， $\mathrm{V}_{\mathrm{TH}}, \mathrm{V}_{\mathrm{TL}}$ ，and the direction of the transfer operation on your plots）
（c）If the maximum forward－biased current of the diode is 0.5 mA and the range of the input voltages is $-2 \leqq \mathrm{~V}_{\mathrm{I}} \leqq 2 \mathrm{~V}$ ，what is the minimum value of the resistor $\mathrm{R}_{3}$ ？

18．Fig．18（a）shows a bistable circuit．Assume that its output saturation voltages $\mathrm{L}_{+}=\left|\mathrm{L}_{-}\right|=12 \mathrm{~V}, \mathrm{R}_{1}=1 \mathrm{k} \Omega$ and $\mathrm{R}_{2}=3 \mathrm{k} \Omega$ ．
（a）Find its threshold voltages $V_{T H}$ and $V_{\mathbf{T L}}$ ．
（b）Sketch its transfer characteristic curve，i．e． $\mathbf{v}_{\mathbf{A}}-\mathbf{t o}_{\mathbf{o}} \mathbf{v}_{\mathbf{b}}$ plot．
（c）Fig．18（b）shows a triangular－wave generator，which comprises the bistable circuit and an integrator．Please sketch the corresponding time－domain waveform of $\mathbf{v}_{A}$ and $v_{B}$ ．
（d）Let $\mathrm{R}_{3}=100 \mathrm{k} \Omega, \mathrm{C}=10 \mathrm{pF}$ ，find the frequency of the triangular wave at $\mathrm{v}_{\mathrm{A}}$ in Fig．18（b）．

Fig．18（a）

Fig．18（b）

19．Fig． 19 shows a multivibrator circuit and its waveforms．Assume that $\mathrm{R}=100 \mathrm{k} \Omega, \mathrm{C}=1 \mathrm{nF}$ ，and the transition threshold voltage of the inverter is $0.5 \times \mathrm{V}_{\mathrm{DD}}$ ．
（a）Which type of multivibrator is it？（bistable／astable／monostable）
（b）Calculate the peak voltage of the $\mathbf{V}_{\mathbf{x}}$ ，which is labelled as $\mathbf{V}_{\mathbf{p}}$ in Fig．19（d）．
（c）Calculate $\mathbf{T}_{1}$ ．（Hint：RC circuit complete response： $\left.\mathrm{v}(\mathrm{t})=\mathrm{v}(\infty)+[\mathrm{v}(0)-\mathrm{v}(\infty)] \mathrm{e}^{-\mathrm{t} / \tau}\right)$

Fig．19（a）

Fig．19（b）

Fig．19（c）

Fig．19（d）

Fig．19（e）

20．（a）Please describe the Barkhausen criterion．
（b）In Fig．20，will the circuit start oscillation or not？Why？

Fig． 20

21．For the circuit in Fig．21，let the OPAMP saturation voltage be $\pm 10 \mathrm{~V}, \mathrm{R}_{1}=100 \mathrm{k} \Omega, \mathrm{R}_{2}=\mathrm{R}=1 \mathrm{M} \Omega$ ，and $\mathrm{C}=0.01 \mathrm{uF}$ ．Please draw the detailed waveforms of various nodes and derive the oscillation frequency of the circuit．

Fig． 21

22．Fig． 22 shows the block diagram of a Class－D amplifier．Please answer the following questions．
（a）Which type of modulation technique is used in Class－D amplifier？（PCM or PWM）
（b）According to the answer of（a），how to generate that kind of modulation waveform？
（c）Which type of output stage has the largest power conversion efficiency？（Class－A，Class－AB， or Class－D）
（d）Which type of output stage has the lowest power conversion efficiency？（Class－A，Class－AB， or Class－D）

Fig． 22
23．Please explain the following terms．
（a）Static power dissipation．
（b）Dynamic power dissipation．

24．Fig． 24 shows a hysteresis comparator circuit，where output saturation voltages $\mathrm{L}_{+}=\left|\mathrm{L}_{-}\right|=10 \mathrm{~V}, \mathrm{R}_{1}=1 \mathrm{k} \Omega$ and $\mathrm{R}_{2}=4 \mathrm{k} \Omega$ ．
（a）Which type of the multivibrator is it？（Hint：bistable，astable，or monostable）
（b）Find the threshold voltages $V_{\mathbf{T H}}$ and $V_{T L}$ of Fig． 24.
（c）Sketch the transfer characteristic curve of Fig．24，i．e．Vin－to－Vout plot．
（d）Please explain why the circuit rejects input interference．

Fig． 24
25．請問 NVIDIA 及 ATI 的主要產品為何？請問 ATI 與成功大學電機工程學系有何關聯？
假設你創業成功，面對其他公司的併購，你會接受併購嗎？還是拒絕併購，繼續經營並開更前瞻及創新的挑戰？請回答並解釋你的原因。

26．Figs．26（a）and 26（b）show two different types of CMOS class AB output stage，respectively．Assume $\left|\mathrm{V}_{\mathrm{OV}}\right|=0.2 \mathrm{~V}$ for all transistors，$\left|\mathrm{V}_{\mathrm{tp}}\right|=0.8 \mathrm{~V}, \mathrm{~V}_{\mathrm{tn}}=0.7 \mathrm{~V}$ ，and dual－supply voltage $\mathrm{V}_{\mathrm{CC}}=2.5 \mathrm{~V}$ ．
（a）Fig．26（a）shows a class $A B$ utilizing source followers $\mathrm{Q}_{1}$ and $\mathrm{Q}_{2}$ ，please find the output swing range of $\boldsymbol{v} \boldsymbol{o}$ ．
（b）Fig．26（b）shows a class $A B$ utilizing common－source transistors $\mathrm{Q}_{5}$ and $\mathrm{Q}_{6}$ ，please find the output swing range of $\boldsymbol{v} \boldsymbol{o}$ ．
（c）Please draw a modified output stage to reduce the output resistance of Fig．26（b）by using feedback． Briefly explain your reason．
